

Catalog of State Actions Agriculture, Forestry, and Waste Management (AFW) Policy Working Group

A catalog of state-level, GHG-reducing actions and policy options prepared by the Center for Climate Strategies (CCS) and the Rocky Mountain Climate Organization based on actions undertaken or considered by Colorado and other states, including regional, state, local and private actions.

Key to Future Rankings of Options in the Tables that Follow:

Potential GHG Emission Reductions <u>1/</u>	Potential Cost or Cost Savings <u>1/ 2/</u>
High (H): At least 1.0 million metric tons (MMt) carbon dioxide equivalent (CO ₂ e) per year by 2020 (~1% of current Colorado emissions)	High (H): \$50 per metric ton CO ₂ e (tCO ₂ e) or above
Medium (M): From 0.1 to 1.0 MMtCO ₂ e per year by 2020	Medium (M): \$5-50/tCO ₂ e
Low (L): Less than 0.1 MMtCO ₂ e per year by 2020, or 1 MMtCO ₂ e by 2050	Low (L): Less than \$5/tCO ₂ e
Uncertain (U): Not able to estimate at this time	Uncertain (U): Not able to estimate at this time
<p><u>1/</u> Several measures may overlap in terms of emissions reductions and/or cost impacts. Estimates assume measures would be implemented independently from other measures.</p> <p><u>2/</u> Costs are denoted by a positive number. Cost savings (i.e., “negative costs”) are denoted by a negative number.</p>	

Definition of “Priorities for Analysis”:

- **High:** High priority options will be analyzed first.
- **Medium:** Medium priority options will be analyzed next, time and resources permitting.
- **Low:** Low priority options will be analyzed last, time and resources permitting.

Notation of Options:

Options marked with an asterisk (*) indicate options that are at least partially “base case” policies, i.e., that have been considered or undertaken at some level in Colorado. Distinctions are made between statewide (S) and local (L) policies where appropriate. Options marked with two asterisks () indicate options that have been proposed for consideration.**

Agriculture, Forestry, Waste Management (AFW)

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
AFW-1 AGRICULTURE – PRODUCTION OF FUELS AND ELECTRICITY						
1.1	Manure Digesters/Other Waste Energy Utilization *(L)		M	L - M	<ul style="list-style-type: none"> Linked with Option AFW2.2 below Costs dependent on livestock type and manure management methods 	Included in Arizona (AZ) and New Mexico (NM) climate action plans, abbreviated as AZ or NM in other catalog options below. Montana priority for analysis listed as MT below. Could include beer waste processing
1.2	Biodiesel Production (incentives for feedstocks and production plants)		M - H	L - M	<ul style="list-style-type: none"> Production from both virgin and waste vegetable oils 	NM MT
1.3	Biomass Feedstocks for Electricity or Steam Production		M	Neg - L	<ul style="list-style-type: none"> Need to identify viable feedstocks and volumes [e.g., crop residue (wheat straw, corn stover) or energy crops (switchgrass)] 	AZ, NM
1.4	Ethanol Production (includes agriculture, forestry, and waste feedstocks)*		M - H	M - H	<ul style="list-style-type: none"> Starch- (e.g. corn-) and cellulosic production processes. 	AZ, NM MT
AFW-2 AGRICULTURE – FERTILIZER AND MANURE MANAGEMENT						
2.1	Crop Management (improve efficiency of		L-M	L-M	<ul style="list-style-type: none"> Significant opportunities beyond current 	•

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
	fertilizer use; education/technical service for organic farming)				practice?	
2.2	Manure Management (handling and storage, and improve application methods) *(S)		L - M	U	<ul style="list-style-type: none"> Linked with Option AFW1.1 above and 2.1, 2.3 below. Co-benefits include reduction of ammonia and VOC emissions. 	<ul style="list-style-type: none"> Application improvement includes incorporation into soil, instead of surface spray/spreading.
2.3	Manure Composting		L	U	<ul style="list-style-type: none"> Potentially most feasible in the poultry, dairy or beef cattle sectors. 	<ul style="list-style-type: none"> Potential for reduction in CH4 emissions; impacts to N2O emissions unclear.
2.4	Changes in Animal Feed (optimize nitrogen for N2O reduction)		L - M	M	<ul style="list-style-type: none"> Co-benefits include reduction in ammonia emissions. 	<ul style="list-style-type: none"> Option includes supplements to reduce CH4 from enteric fermentation, as well as nitrogen efficiency to reduce downstream N2O.
2.5	Reduce Non-Farm (Residential and Commercial) Fertilizer Use		L	U	<ul style="list-style-type: none"> Emissions from non-farm application are not currently in the inventory; unclear what the reductions and costs would be. 	<ul style="list-style-type: none"> Additional research needed on the levels of N2O emissions from lawns, golf courses, etc.
AFW-3	AGRICULTURE – SOIL CARBON MANAGEMENT					
3.1	Conservation Tillage/No-Till (carbon sequestration and reduced energy use)		M	L	<ul style="list-style-type: none"> Significant opportunities beyond current practice? 	<ul style="list-style-type: none"> NM, MT Need estimates on current practices/potential for increased acreage.
3.2	Reduce Summer Fallow (increase soil C content, reduce N2O emissions)		L	U	<ul style="list-style-type: none"> Significant opportunities beyond current practice? 	<ul style="list-style-type: none">
3.3	Increase Winter Cover		L	U	<ul style="list-style-type: none"> Significant opportunities beyond current 	<ul style="list-style-type: none">

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
3.4	Improve Water and Nutrient Use (to minimize soil C loss) *(S)		L	L	<ul style="list-style-type: none"> Significant opportunities beyond current practice? 	
3.5	Rotational Grazing/Improve Grazing Crops and/or Management		L	L	<ul style="list-style-type: none"> 	
3.6	Application of Biochar to Soils				<ul style="list-style-type: none"> 	
AFW-4 AGRICULTURE – LAND USE CHANGE						
4.1	Convert Cropland to Grassland or Forest		M	?		AZ, NM <ul style="list-style-type: none"> Need estimates of marginal agricultural land with the potential for conversion.
4.2	Preserve Open Space/Agricultural Land *(S,L)		M	?	<ul style="list-style-type: none"> Reductions occur both from higher retention of carbon in soil and lower transportation activity. 	AZ, NM MT
4.3	Promote “No Net Loss” of Agricultural Land		M	?	<ul style="list-style-type: none"> Reductions occur both from higher retention of carbon in soil and lower transportation activity. 	
4.4	Strategic Agricultural Land Use Management				<ul style="list-style-type: none"> 	
4.5	Prevent conversion of grassland to croplands (includes opportunities to keep CRP lands in permanent cover)				<ul style="list-style-type: none"> 	Increased demand for corn-based ethanol can act as an incentive for converting grassland to crop production. Need to keep in mind relationship between this option

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
						and ethanol and biodiesel options
AFW-5 AGRICULTURE – FARMING PRACTICES						
5.1	Convert Diesel Farm Equipment to LNG/CNG or Hybrid Technology		L	M - H	<ul style="list-style-type: none"> LNG/CNG engines or engine conversions reduce BC emissions Availability of diesel hybrid equipment for farm applications? 	
5.2	Organic Farming *(S)		M	L	<ul style="list-style-type: none"> Reductions occur via lower intensity agricultural practices (nutrient/pesticide application, reduced tillage) and higher soil carbon 	NM MT
5.3	Programs to Support Local Farming/Buy Local *(S)		L - M	U	<ul style="list-style-type: none"> Reductions occur through lower transport related emissions. 	NM, MT
5.4	Reductions in on-farm energy use (includes installation of solar or wind power, or hydro-powered generators for irrigation)				<ul style="list-style-type: none"> 	Note there may be a tension or conflict between preserving open space and wind farming
AFW-6 FORESTRY – BIOMASS PROTECTION AND MANAGEMENT						
6.1	Forest Protection – Reduced Clearing And Conversion to Nonforest Cover		M - H	M - H	Reductions depend on current rates of clearing; Relatively large amount of carbon can be protected per acre	AZ, NM MT Anticipate a 10% loss of forest cover in the interior West over the next 50 years at the urban/wildland interface
6.2	Increase Maintenance of Urban and Residential		L	L - M	Cost savings are possible if thinnings directed to products and energy	AZ (“Forest Ecosystem Management – Residential Lands”)

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
	Trees *(L)					NM (“Forest Health and Restoration – Residential lands”)
6.3	Afforestation and/or Restoration of Nonforested Lands		L-M	M - H	Reductions depend on available land; Relatively high rate of c-sequestration/acre	MT – priority option covers 6.3/6.4 Growth rates are slow in CO
6.4	Reforestation/Restoration of Managed Stands *(S,L,Fed)		L-M	M - H	Reductions depend on available land and initial stand conditions (highly degraded stands have higher potential);	AZ
6.5	Increased Stocking of Poorly Stocked Lands		L - M	M - H	Reductions are greatest if applied to lands that are very poorly stocked; poor sites may be more expensive to treat	<i>AZ & NM have general forest management options that essentially encompass specific practices in the rows below:</i> AZ (“Forest Ecosystem Management – Other Lands”) NM (“Forest Health and Restoration – Other lands”) MT – similar priority option May be limited opportunity in CO
6.6	Age Extension of Managed Stands		L	M	Relatively low c-sequestration per acre; age-extension increases standing carbon stocks, however sequestration rates are slows in older stands	
6.7	Thinning and Density Management of Managed Stands *(S,L,Fed)		M - H	L - M	Costs and benefits depend on whether the practice is combined with energy recovery; thinning encourages growth of bigger trees in the long run	

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
					but may not change net c balance; potential benefits of more biomass going to wood products (because of larger stems for harvest)	
6.8	Fertilization and Waste Recycling		L	U	Reductions depend on full life cycle analysis to consider impacts of nitrogen based fertilizers	
6.9	Expand Short Rotation Woody Crops (for fiber and energy)		M	M - H	Reductions depend on available land and whether practice is combined with energy capture	
6.10	Expanded Use of Genetically Preferred Species		L	U	Depends on opportunities for seeding; may be only a marginal increase in c-sequestration	
6.11	Modified Biomass Removal Practices (reduced decay and energy use)		L - M	U	Reductions depend on available acreage, current practice, and energy production	
6.12	Fire Management and Risk Reduction Programs *(S,L,Fed)		L	U	Depends on flexibility to modify programs; Reductions may be relatively low because primary objective of programs is not carbon sequestration	
6.13	Ecosystem Health Risk Reduction Programs (pest/disease, invasive species) *(S,L,Fed)		L	U	Ditto	
6.14	Drought Management Programs (tree selection,		L	U	Ditto	

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
6.15	Flood and Riparian Management Programs (tree selection, placement, protection) *(S,L)		L	U	Ditto	
6.16	Watershed Management Programs (stand retention, enhancement and management) *(S,L,Fed)		L	U	Ditto	
6.17	Habitat Management Programs (stand retention, enhancement and management) *(S,L, Fed)		L	U	Ditto	
AFW-7	FORESTRY - WOOD PRODUCTS AND WASTE					
7.1	Improved Mill Waste Recovery		L	L	Reductions depend on current levels of efficiency, which tend to be high	
7.2	Improved Logging and Other Residue Recovery (e.g., removal of insect damaged wood from roadless areas)		L - M	U	Reductions depend on energy recovery and current levels of efficiency	
7.3	Expanded Use of Wood Products for Building Materials		M	U	Cost depends on relative costs of materials	
7.4	Expanded Use of State and Locally-Grown Wood Products		U	U	Reductions depend on current levels of wood product imports and potential for reducing transportation emissions	

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
AFW-8 FORESTRY – ENERGY PRODUCTION						
8.1	Expanded Use of Forest Biomass Feedstocks for Electricity (fuel switching)		M - H	L - M		MT priority option covers 8.1/8.2
8.2	Expanded Use of Forest Biomass Feedstocks for Residential, Commercial/Institutional, or Industrial Heating		M - H	L - M		
8.3	Improved Efficiency of Wood Burning Stoves and Direct Heat *(S)		L	U		
8.4	Improved Energy Capture from Wood Waste Combustion *(L)		L - M	U		
8.5	Expanded Landfill Methane Recapture (wood products waste)		L - M	L - M	Reductions depend on existing sites that capture gas	
8.6	Improved Commercialization of Biomass Gasification and Combined Cycle		U	U		AZ
8.7	Resource assessment for biomass energy production from feedstocks in CO					Does an assessment already exist?
AFW-9 WASTE MANAGEMENT – WASTE MANAGEMENT STRATEGIES						
9.1	Advanced Recycling and Composting *(L)		L - M	L	•	AZ and NM (as one of the RCI options in both states) MT
9.2	Advanced Municipal Solid		L - M	Neg - L	•	•

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	
					Notes	
	Waste Management Practices (e.g., bioreactors)					
9.3	Source Reduction Strategies *(S,L)		L - M	L	•	•
9.4	Resource Management Contracting		U	U	•	• Programs that compensate waste contractors based on performance in achieving waste reduction goals rather than the volume of waste disposed
9.5	Manure Digesters *(L)		M	Neg - L	•	• Also under Agriculture (Option AFW1.1)
9.6	Waste Coal Recapture		?	?	•	• Applicable to CO?
9.7	Prevent landfilling of unprocessed organic material		H	L	•	•
AFW-10 WASTE MANAGEMENT – LANDFILL GAS STRATEGIES						
10.1	Flare Landfill Methane at non-NSPS (smaller) sites		M – H	M - H	• Federal New Source Performance Standards and Emissions Guidelines require methane capture at larger landfills.	• Should be limited to consideration at sites where energy can not be recovered feasibly; • Need to consider energy required to collect CH4.
10.2	Methane & Biogas Energy Programs		L	U	• Significant opportunities for digesters/energy utilization outside of the municipal solid waste sector?	•
10.3	Landfill Methane Energy Programs *(L)		M	Neg - M	• Methane conversion to motor fuels (LNG), electricity, steam, or space heat are examples	• Also included under option 8.5.

Option No.	GHG Reduction Policy Option	Priority for Analysis	Potential GHG Emissions Reduction	Potential Cost or Cost Savings	Ancillary Impacts, Feasibility Considerations	Notes
11.1	Energy Efficiency Improvements		L	Neg - L	•	•
11.2	Lower Waste Processing Needs (lower water consumption, waste production) *(L)		L	U	•	•
11.3	Install Digesters and Turbines or Fuel Cells		L - M	U	• Reductions occur via methane control and offsetting fossil energy use	•
AFW-12	AFW General				•	•
12.1	Developing opportunities for agriculture and forestry offsets				•	• Enhancing opportunities to reduce GHG emissions through ag and forestry practices and use them to offset emissions from other sectors
